Dear Crash Data Researchers/Users:

Thank you for choosing crash data from the National Highway Traffic Safety Administration (NHTSA) for your research or other use. The information contained in this motor vehicle crash report is collected, maintained and distributed in accordance with Public Law 89-564. In accordance with this Public Law, NHTSA is required not to release any case information until completion of quality control procedures. These procedures include a review of the case material to extract all names, licenses and registration numbers, non-coded interview material, non-research related researcher comments in the margins, non-factual data, and the production number portion of the vehicle identification number (VIN).

If you requested NHTSA to query its database files in order to identify a specific crash, then that query was made using non-personal descriptors you provided for use in our search. This motor vehicle crash may have been identified from a data search and matches the general, non-personal descriptors you provided, but we cannot confirm that this is the specific crash report you requested.

If you have any questions with regard to the above procedures, please contact the Field Operations Branch, Crash Investigation Division, National Center for Statistics and Analysis at 202-366-4820. Again, please be advised that we cannot confirm that this is the case that you have specifically requested nor can we certify the information to be correct.

Case Vehicle (A): 1999 Mercury
 Type: Mountaineer, 4-door SUV
 Driver: 56-year-old male
 CDC: 12-FZEW-2

Vehicle (B): 2000 Ford
 Type: E-350 extended passenger van
 Driver: 39-year-old female
 CDC: 06-BYEW-2

SITUATION

(Slide 1) Case vehicle (A) was traveling west in the outside westbound lane of a straight section of a dry, asphalt, four-lane roadway, (slide 2) with a speed limit of 64 kph (40 mph). Vehicle (B) was traveling west in the same westbound lane, ahead of case vehicle (A). The driver of case vehicle (A) reportedly took off his seatbelt to pick up an item that had fallen onto the floor from the right-front seat. When he looked up, he saw vehicle (B) stopping in traffic ahead of him. The driver of case vehicle (A) reportedly attempted to avoid a collision by veering to the left and braking. Case vehicle (A) struck the left rear of vehicle (B) with its right front.

GENERAL VEHICLE DAMAGE AND ESTIMATED CRASH SEVERITIES

(Slide 3) Damage to case vehicle (A) was moderate. The direct-damage length was 100 cm and began at the right-front bumper corner, resulting in a 64% vehicle overlap. The maximum crush was 42 cm and occurred at the right-front bumper corner, above the bumper. The left wheelbase was extended 6 cm, and the right wheelbase was reduced 10 cm.

(Slide 4) Damage to vehicle (B) was minor. The direct-damage length was 100 cm and began at the left-rear bumper corner. The maximum crush to the bumper was 15 cm and occurred at the left-rear bumper corner. There was also damage to both halves of the rear cargo door above the bumper.

Using the WinSMASH accident-reconstruction program and (slides 5, 6, 7, 8, 9, 10, 11, 12, 13) c-values for case vehicle (A) and vehicle (B), the following impact severities were calculated:

Vehicle	Variable	Calculated Velocity Change - kph (mph)		
		Total	Longitudinal	Latitudinal
Case Vehicle (A)	delta V	20 (12)	-20 (-12)	0 (0)
Vehicle (B)	delta V	17 (11)	17 (11)	0 (0)

DESCRIPTION OF DAMAGE TO CASE VEHICLE (A)

Exterior

(Slides 14, 15, 16, 17) The front bumper, the right headlight assembly, the grille, the radiator, the right fender, and the right-front wheel and strut were damaged. The hood was crushed, and the hood latch was jammed. Both hood hinges were damaged, but did not separate. The rear edge of the hood was not elevated, and did not contact the windshield. All doors remained closed and operational.

Interior

(Slides 18, 19, 20, 21, 22, 23) This vehicle was equipped with both steering-wheel and passenger frontal-impact airbags, which deployed during the frontal impact. No damage was noted to the airbag skins or (slides 24, 25, 26, 27) to the module doors/flaps. (Slide 28) The steering-wheel rim was not deformed and there was no deformation of the steering-wheel spokes. The left side of the sunroof molding, the left sunvisor, the windshield and the driver knee bolster below the steering column were damaged from driver contact. There was no rotation of the steering column. No intrusions were noted.

(Slides 29, 30, 31, 32) No contact points were noted on the left-roof siderail, the left upper A-pillar, or the left-front door interior panel. No damage was noted to the upper and mid instrument panels.

OCCUPANT INJURIES AND KINEMATICS

The 6-ft, 1-in, 210-lb, 56-year-old male driver (slide 33) was not wearing the available three-point belt, and the steering-wheel airbag deployed. (Slide 34) On impact, he moved forward and to the right into and over the airbag, and his head contacted the edge of the sunroof frame and left sunvisor. He sustained an abrasion to his forehead, probably from contact with the sunroof frame molding, (slide 35) as indicated by a hair deposit, or possibly from contact with the left sunvisor, (slides 36, 37) as indicated by a scuff mark on the exterior surface of the visor and the broken left sunvisor vanity mirror. He sustained an abrasion to the nose, probably from contact by the airbag. He sustained a comminuted fracture, and dislocation of the right acetabulum and a contusion to

the right knee, (slides 38, 39) from axial loading through the thigh due to knee contact with the knee bolster. (Slide 40) A spider web pattern was noted near the center of the windshield, but no injury was reported that could be associated with it.

The following table and (slide 41) attached drawing summarize the injuries sustained by the driver.

Occupant: Driver
 Restraints: 3-point belt not worn; airbag deployed

Age: 56 years
 Stature: 185 cm (6 ft, 1 in)

Gender: Male
 Mass: 96 kg (210 lb)

CODES FOR COLUMN B, OCCUPANT SPACE NUMBER

OCCUPANT SPACE NUMBER IS A TWO-DIGIT CODE. THE USE OF THE CODE IS DETERMINED BY THE VEHICLE SEAT CONFIGURATION AT THE TIME OF THE ACCIDENT.

FIRST DIGIT

THE FIRST DIGIT (LEFT DIGIT) DENOTES THE SEAT ROW, WITH CODE VALUES FROM 1 TO 5.

SECOND DIGIT

THE SECOND DIGIT (RIGHT DIGIT) DENOTES THE POSITION ON THE SEAT AND, IN SOME INSTANCES, THE WIDTH OF THE SEAT.

- | | | | |
|--------------------------|-----------------|-------------------------|---|
| (1) LEFT | (3) RIGHT | | INDIVIDUAL SEAT |

Abstract The purpose of this study was to determine whether there were differences in the prevalence of self-reported depression between men and women who had been exposed to violence during childhood and adulthood. Data from the National Longitudinal Study of Adolescent Health (*N = 9,800*) revealed that exposure to violence during childhood and adulthood was associated with increased risk of self-reported depression. However, the association between exposure to violence and self-reported depression was stronger among women than men.
